UX/UI *Designer*

with six years in digital design: 3.5 in enterprise B2B SaaS, designing web and mobile apps for contact-centre (CCaaS), CRM and care-home software, after 2.5 freelancing on web and graphic design. Designed the AI Agent end to end; client adoption of the product grew 3.5x (4 to 14 clients) in the six months after launch. Designed a CRM deal pipeline; usability task success rose from 72% to 92% across two test rounds (34 users). Focus: conversational AI interfaces, role-based sales and contact-centre workflows, design systems.

Skills

Research: user interviews, usability testing, research synthesis, journey mapping, workflow observation, survey research

Design: interaction design, information architecture, user flows, wireframing, prototyping, high-fidelity UI, responsive and mobile design, dashboard design, role-based workflows and permissions, accessibility (WCAG)

Conversational AI: conversational UX, AI-assisted workflows, human-in-the-loop controls, approval flows, inline editing, AI-to-human handoff

Design systems: design tokens, component libraries, component variants, Figma library management, documentation, versioning, governance

Collaboration: cross-functional work with product and engineering, designer-developer coordination, developer handoff, design reviews

Tools: Figma, FigJam, Storybook, Adobe Illustrator, Notion

Applied AI: Claude, ChatGPT, Gemini, Figma AI and Model Context Protocol (MCP) integrations, used for research synthesis, UX writing and documentation. I check all AI output before use.

Work Experience

UI/UX Designer, Worktual (formerly Vectone Solutions)

Feb 2023 – Aug 2026. B2B CCaaS, CRM and care-home software.

- Designed the mobile apps alongside the web products across CCaaS, CRM and AudraCare; all shipped.

AI Agent: conversational UX and workflow design

- Designed the AI Agent end to end: administrator setup (including roles and permissions), the conversational interface and AI-to-human handoff.
- Designed the agent workspace (live interactions, customer profiles, tickets, follow-up tasks) and the agent and supervisor dashboards.
- Replaced separate task, reminder and ticket flows, which took one to three screens, with one conversational interface.

- Designed mandatory human approval and inline editing for AI-retrieved phone numbers and email addresses, after a comparison of AI-assisted and conventional workspaces with 56 contact-centre agents exposed accuracy failures. Set controls by risk, not uniformly; the controls shipped.
- Client adoption of the AI Agent grew 3.5x (4 to 14 clients) in the six months after launch. This is a product-level result, not isolated from model behaviour, integrations and training.

CRM deal pipeline and sales analytics

- Designed the deal pipeline and sales analytics for reps and managers. After interviewing 8 reps and 4 managers, split stale-deal signals into inactivity, close-date and engagement-risk flags.
- Prioritised three mobile actions for reps (log a call, update stage, set next step) and deferred full mobile analytics.
- Added stage-change undo and duplicate-deal detection between the two usability rounds.
- Usability task success rose from 72% to 92% across the two rounds (34 users, six tasks).

Design system

- Designed components, variants and design tokens for a 100+ component system used across CCaaS, CRM and AudraCare.
- Owned the system in my final year: naming, versioning, change reviews, documentation and designer-developer coordination.
- Restructured the Figma library and documentation after adoption research (interviews, survey, workflow observation). Observed developers reusing components, more consistent UI and fewer design/QA corrections; none of this was measured.

AudraCare: care-home software

- Designed workflows for care staff, administrators and guardians on an NHS-certified care-home platform.
- Designed the incident-management tracking system added to meet certification requirements.

Earlier Experience

Freelance Designer, Self-employed

Jun 2020 – Jan 2023

- Designed websites and graphics for individuals and small businesses, on a project basis.

Business Development Executive, BYJU'S (Think and Learn Pvt Ltd)

Mar 2020 – May 2020

- Consultative, needs-based sales of an ed-tech platform to consumers.

Graduate Engineer Trainee, TI Metal Forming (deployed at Hyundai)

Mar 2019 – Jan 2020

- Monitored production-line operations and checked processes against requirements.

Education

Bachelor of Engineering (Mechanical Engineering)

St. Xavier's Catholic College of Engineering, Kanyakumari District (affiliated to Anna University). 2014 – 2018.

Other Interests

Story writing, videography and video editing (Adobe Premiere Pro), graphic design, physics and cosmology, and contemporary classical and film-score music.
